

Measuring Your Space & Beginning Your Design

- 1) Measure from the corner as shown in the drawing.
- 2) Measure total length of all walls corner to corner.
- 3) Indicate locations and sizes of the doors and windows. Include distance from corner to window/door dimensions.
- 4) Indicate door swings, location of electrical plugs and center line of sink. Include waterline and floor drain locations.
- 5) Confirm the room height and location of drop ceiling or bulk heads. Can your space handle 30", 36" or 40" tall cabinets?
- 6) Indicate appliance locations and sizes including width, height and depth.
- 7) Double check all of the measurements for accuracy.
- 8) When beginning your design, start with what you already know: Windows, doors, sink, fridge, freezer, dishwasher, over the range microwave, range, cooktop, garbage bin, spice pullouts on either side of range, and subtract that from your overall wall length so that you know what you have left to work with.
- 9) Working with a designer is helpful and accurate plans will help you and your installer give you the kitchen you are dreaming of.
